

Send E-invoices

Cut costs, eliminate errors and speed up payment collections with Accountis Enterprise AR

Dataline's Enterprise e-invoicing Receivables Platform

enables you to automate your receivables process from capturing purchase orders and issuing invoices to controlling debtors and collecting payments online.

Dataline's Accounts Receivable solution integrates easily with existing ERP or finance systems to save resources, eliminate repetitive tasks and speed up payment collections. It can work as a stand-alone solution or in conjunction with Dataline's e-invoicing AP platform and additional modules to provide a complete end-to-end solution.

Dataline's Enterprise e-invoicing AR is ideal for organisations with large invoice volumes who need a fully automated solution that integrates easily with existing, often disparate back-office systems. By consolidating invoice data quickly and simply, Dataline Enterprise AR presents one-view of all receivables transactions for the benefit of both internal users and buyers alike.

Used by many of the world's largest organisations, Dataline Enterprise AR supports multiple currencies and languages.

Fast Customer Enrolment with 100% Coverage

To sign up a new customer with Dataline Enterprise AR all you need is their email address. It is a simple, easy-to-use service that even your smallest customers will quickly adopt:

- Branded registration screens linked from your website
- Simple enrolment process, with instant access to invoices
- Help with marketing materials & promotion
- Expert customer adoption advice & support
- Full after-sales technical and customer support

We understand that service adoption is critical to the success of our e-invoicing project and we will help you every step of the way. The Dataline Onboarding Team will be on hand to assist you throughout the enrolment process with help and advice.

FEATURES AND BENEFITS

Quicker Settlement

Online dispute resolution, approval and payment lead to a quicker more efficient settlement process and a reduction in debtor days.

Improved Efficiencies

Reduced manual input, automated debtor management, improved cash flow and better customer service all contribute towards a more cost-effective, efficient process.

Reduced Costs

Sending and processing invoices electronically will instantly reduce costs associated with manual paper-based invoicing such as labour, materials and postage. E-invoicing eliminates lost in the post excuses and the need for copy invoices.

The potential saving for invoice issuers is at least 57% per invoice*

Improved Visibility

Real-time, 24/7 access to all your transactions gives you rapid access to the information you need to make more accurate cash flow forecasts and planning decisions.

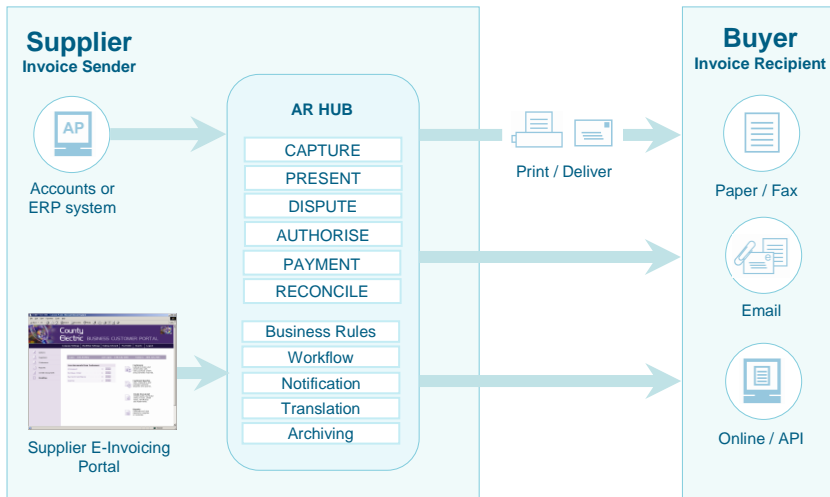

Integrated Payments

Enabling customers to make invoice payments in real-time online drastically speeds up the settlement process and helps to improve cash flow.

Green Technology

E-invoicing enables you to save energy by eliminating wasteful processes such as printing, delivering and archiving paper invoices. E-invoicing is a sustainable technology that will help you to achieve your green objectives now and in the future.

How e-invoices are sent using Dataline's Enterprise AR Solution

How the Dataline Enterprise AR System Works

Sending e-invoices: With Dataline's Enterprise AR you can send e-invoices in any specified language, currency and format. The system captures data directly from your existing software (e.g. Word, Excel, Oracle, SAP, Sage) and automatically generates the e-invoice. The e-invoices are then sent to customers and made available to be viewed and managed online via a secure E-Invoicing Portal. Alternatively you can generate an e-invoice online by using a simple web form accessed from the Portal.

Receiving e-invoices: Customers view their e-invoices by logging into the secure E-Invoicing Portal. Customers have the option to log a query against the invoice, approve it or download the data directly into their finance system. Other delivery options include email, fax or even paper delivery by post, depending on their individual requirements.

Managing your documents: You can access and manage all your AR documents using the E-Invoicing Portal. Via the Portal you have real-time access to all your documents and therefore complete visibility of all transactions. From one secure location, you can view and search documents, generate reports, settle disputes, control debtors, add buyers, manage buyer accounts and payments.

Key Features:

- Create, send and present e-invoices securely
- Invoice conversion into any required format
- Receive e-purchase orders and other documents
- Real-time, one view of all transactions
- Workflow maps onto internal business processes
- Manage customer queries electronically
- Automatic debtor control functions
- Full audit trail archive with document history
- Receive electronic payments and set-up direct debit schemes

EIP CASE STUDY

Compliant, European E-Invoicing for DHL

Dataline's Enterprise AR was integrated with DHL's existing finance systems to consolidate invoice data and make it available for expedient processing via the EIP Hub. Using a DHL branded E-invoicing Portal the DHL finance team generate, send and manage compliant e-invoices from one secure location. All new and archived e-invoice data is available 24/7 from any location and customised workflow functions ensure that business processes and data flows are streamlined and audited.

Via the E-invoicing portal, DHL Account Managers have the ability to search and view all documents relating to their accounts across Europe, enabling them to manage customers more effectively. Following a simple, self-service online registration process, DHL customers can login to the Portal to view new and archived invoices, download document data in multiple formats, submit queries and view documents in the language of their choice.

With Enterprise AR, DHL now have:

- VAT compliant e-invoice processing in Europe
- Multi-currency and multilingual options for all users
- Unified interface across multiple finance systems
- Full document management with real-time reporting
- Document search with compliant archiving
- Online customer query management
- Improved visibility for account managers & finance
- Easy online enrolment for rapid customer adoption
- Expedient implementation via the ebPrinter
- Quick Return on Investment
